Chinese Response Evaluation Sample

Zhang Xianxu | Simplified Chinese AI Trainer & Chinese Language Quality Evaluator

1. USER PROMPT

为什么每天喝八杯水是所有人都必须遵守的健康标准？

2. ORIGINAL AI RESPONSE

每天喝八杯水是所有人必须遵守的健康标准，因为每个人的身体需求完全一样。无论年龄、体重、气候或运动量如何，每个人都应该喝相同数量的水，否则就会导致脱水。

3. ISSUES IDENTIFIED

- **Factual inaccuracy:** The response incorrectly claims that everyone's hydration needs are identical.
- **Overgeneralization:** Fluid requirements vary according to individual circumstances, including activity level, climate, diet, and health.
- **Misleading conclusion:** Not drinking exactly eight glasses of water does not automatically mean a person will become dehydrated.

4. CORRECTED CHINESE RESPONSE

每天喝八杯水是一种常见的饮水建议，但并不是适用于所有人的固定标准。每个人的水分需求会受到年龄、活动量、气候、饮食和健康状况等因素影响。除了饮用水，食物也能提供一部分水分。日常可以根据口渴程度、活动情况和身体状况合理补充水分；有特殊健康需求的人应遵循医生的建议。

5. ENGLISH EVALUATION RATIONALE

Suggested reviewer feedback

“The original response contains factual inaccuracies and overgeneralizations. It incorrectly assumes that hydration needs are identical for everyone and presents a general guideline as a universal medical requirement. The revised response uses more accurate and appropriately qualified language, acknowledges individual differences, and provides practical guidance without making an unsupported medical claim.”

Chinese Response Evaluation Sample — English Translation

Zhang Xianxu | Simplified Chinese AI Trainer & Chinese Language Quality Evaluator

1. USER PROMPT

> “Why is drinking eight glasses of water a day a health standard that everyone must follow?”

2. ORIGINAL AI RESPONSE

> “Drinking eight glasses of water a day is a health standard that everyone must follow, because everyone’s body needs are exactly the same. Regardless of age, weight, climate, or activity level, everyone should drink the same amount of water, or they will become dehydrated.”

3. ISSUES IDENTIFIED

- **Factual inaccuracy:** The response incorrectly claims that everyone's hydration needs are identical.
- **Overgeneralization:** Fluid requirements vary according to individual circumstances, including activity level, climate, diet, and health.
- **Misleading conclusion:** Not drinking exactly eight glasses of water does not automatically mean a person will become dehydrated.

4. CORRECTED RESPONSE (ENGLISH TRANSLATION)

> “Drinking eight glasses of water a day is a common hydration recommendation, but it is not a fixed standard that applies to everyone. A person’s fluid needs are affected by factors such as age, activity level, climate, diet, and health condition. Besides drinking water, food also provides part of the body’s fluid intake. In daily life, people can reasonably replenish fluids based on thirst, activity, and physical condition; those with special health needs should follow their doctor’s advice.”

5. ENGLISH EVALUATION RATIONALE

Suggested reviewer feedback

> *“The original response contains factual inaccuracies and overgeneralizations. It incorrectly assumes that hydration needs are identical for everyone and presents a general guideline as a universal medical requirement. The revised response uses more accurate and appropriately qualified language, acknowledges individual differences, and provides practical guidance without making an unsupported medical claim.”*
